Objective

A Software Engineering student at UIT with a strong interest in building scalable Backend systems. Equipped with practical skills in Java, RESTful APIs, and a proactive learning mindset. I am actively seeking a full-time internship opportunity to apply my academic knowledge, learn from experienced engineers, and contribute to real-world projects. I have arranged my studies to be fully available for a full-time schedule.

Education

University of Information Technology (UIT) - VNUHCM

Sep. 2023 - 2027 (Expected)

Software Engineering

GPA: 8.91 / 10

Technical Skills

Languages: C++, Java, C#, SQL

Frameworks: Spring Boot

Databases: PostgreSQL, MySQL, MS SQL Server

Tools: Git/GitHub, Docker (basic), Postman, Vercel, Netlify, Cloudinary, Aiven, Supabase

Certificates / Achievements

English: TOEIC 940

Listening & Reading Test (IIG Vietnam)

Issued:

Mar 2026

Foundations of User Experience (UX) Design

Google

Issued:

May 2026

Academic Encouragement Scholarship - UIT

Awarded for 2 semesters

Projects

Tourism Management System - Travel Adventure | 🌐 Source Code

Sep - Dec 2025

Full-stack Developer | Team Size: 2 | Java, Spring Boot, MySQL, Cloudinary

A comprehensive platform digitizing travel agency workflows with real-time seat inventory control, automated pricing, and secure payment processing to prevent overbooking.

- **Architected** a robust backend system using **Spring Boot** and **MySQL**, implementing **JWT-based** Role-Based Access Control (RBAC), soft deletes, and optimistic locking to ensure data consistency during concurrent bookings.
- **Integrated** the **PayOS** payment gateway with secure webhook handlers to automate transaction verification and invoice generation, streamlining the customer checkout experience and ensuring reliable payment processing.
- **Optimized** media storage and performance by engineering a **Cloudinary** image upload pipeline for tour attractions, reducing core server payload and accelerating asset delivery for the frontend application.
- **Developed** comprehensive REST APIs for cart and booking management, and streamlined cross-functional collaboration by auto-generating API documentation with **Swagger/OpenAPI**.

TaskPilot (AI-Powered Project Management) | 🌐 Source Code | 🌐 Live Demo

Jan 2026 – Present

Software Developer | Team Size: 2 | Java, Spring Boot, PostgreSQL, LangChain4j, LLM APIs, OneSignal, Netlify

An ongoing AI-driven project management platform designed to automate workflows, featuring AI-assisted task processing, real-time notifications, and a robust client-server architecture.

- **Integrated OneSignal** to establish a reliable push notification pipeline, ensuring real-time event delivery and enhancing overall system responsiveness.
- **Configured** and deployed the frontend application via **Netlify**, setting up a continuous delivery (CD) workflow to streamline and accelerate release cycles.
- **Facilitated** seamless client-server communication by assisting in robust **RESTful API** consumption, ensuring efficient data exchange and system interoperability.
- **Collaborated** on the integration of AI functionalities, utilizing **LangChain4j** and **LLM APIs** to consume intelligent text processing endpoints and enhance task automation.
